

THE ALICIA

And The Lotus Pod

The next generation in female hygiene

HELPING SAVE THE PLANET

In 1998, seven billions tampons and 12 billions sanitary pads and their packaging were disposed into landfills and sewage systems worldwide. With landfills and population problems on the rise, The Alicia is committed to reducing the serious eco-footprint of feminine hygiene by offering The Alicia to women globally.

The pods are the most revolutionary concepts in female hygiene since the tampons. To women globally the pods are an innovative breath of fresh air, making a difference to women globally. The pods will change how menstrual flow is managed. They are cheaper, cleaner, safer and greener.

HOW THE ALICIA WORKS

The Alicia is very sanitary, comfortable, reliable and convenient. It holds one full ounce (30 ml). The vagina is continuously self-cleansing, washing away dead cells and bacteria. Tampons absorb the natural fluids that we need to keep the vagina clean and moist. The Alicia is nonabsorbent and simply collects the menstrual flow, leaving the natural moisture level of the vagina undisturbed. The Alicia is ideal for all activities and is suitable for all menstruating women.

MENSTRUAL BLOOD ABLE TO SAVE LIVES

MENSTRUAL BLOOD : AVAILABLE SOURCE OF MULTIPOTENTIAL STEM CELLS

ALICIA IS LOOKING FOR wholesale global distributors

**MENSTRUAL STEM CELLS
KITS ARE AVAILABLE IN
THE USA THROUGH C'CELL
AND IN INDIA THROUGH LIFE
CELL INTERNATIONAL**

THE ALICIA THE NEXT GENERATION IN WOMEN'S HYGIENE

PURCHASE HERE !

For centuries women have struggled with ways to easily dispose of the menstrual blood, but evolving stem cell research may allow to save lives with it. Recent

discoveries have revealed that human tissues once thought as waste (such as placenta and umbilical cord, and menstrual blood) could provide scientist with life

saving stem cells. Stromal stem cells- cells that are present in the connective tissues - have been recently identified in endometrial tissue of the uterus.

A FEMININE ALTERNATIVE

The conventional products we use today as essential feminine hygiene products are expensive, often contain bleach, chemicals and dioxins - all potentially harmful to our bodies. They can be difficult to dispose of; often highly uncomfortable and well, they are just plain awkward and inconvenient with their little strings, clips and sticky strips. There are over 577 million women who do not have access to any feminine hygiene products. They have to resort to almost prehistoric methods using crumpled newspaper, old rags, or a combination of dried leaves, cow dung and mud.

In knowing that these women suffer the way they do, being ostracized from their own societies because of their period, this revolutionary new approach to feminine hygiene, The Alicia™, will work with Government Health Programs & Charities, allowing for less fortunate women than yourself regain their dignity, self-respect and self-esteem.
